Contract management

In the daily shipping-business more and more contracts must be supervised. Since the number of the contracts as well as its complexity rise continuously, an efficient contract management as well as optimal transparency are imperative.

**ContractStar** is a contract management software for the central administration of all contracts that were concluded and relate to the shipping company. These contracts can be managed department-wise generally and archived digitally.

All concluded contracts are divided into specific categories and can be filtered almost arbitrarily as well as exported to PDF or Excel. The contract safety is increased by reminder message of expiring contracts via e-mail to the responsible people.

**ContractStar** offers the user a high degree of control and saves time finding out about important contracts at any given time.
